NanoGetic S.L. provides a full range of customized nanoparticles (NPs). These NPs, based on cross-linked polystyrene, can be used to conjugated a large variety of biological and chemical cargoes by bio-orthogonal strategies following multi-step solid phase organic synthesis. Engineered nanoparticles (ENPs): Preparation of bi and trifunctional cross-linked polystyrene NPs conjugated to different cargoes to be chosen between: Nucleic acids (DNA, mRNA, siRNA, miRNA, anti-miRNA), Proteins, Fluorophores, Small-molecules (sensors and drugs), Antibodies, Single domain antibodies, Peptides and peptoids.

Coated Particles can be prepared, either by passive adsorption or covalent coupling depending upon the intended applications.

NPs are spherical and monodisperse, ranging from 100-2000 nm.

Nanoparticles manufactured by Nanogetic can be used for: Drug delivery, personalized medicine and diagnostic.
